

Business Rules Catalogue

Approved Business Rules and KPI Logic

Document ID	EC-BA-003-BR
Version	1.0
Project	E-Commerce Sales & Customer Analytics
Period	January 2023 - April 2023
Status	Baseline / Portfolio Case Study

Portfolio note: Simulated case study using illustrative requirements, roles and data.

1. Purpose

This catalogue establishes the business logic that should be applied consistently in analysis, reporting and UAT.

2. Order Rules

- Revenue KPIs include only qualifying completed orders.
- Cancelled orders are excluded from completed-order revenue.
- Returned orders remain identifiable for return reporting.
- Duplicate transactions must be identified before aggregation.

3. Customer Rules

- A customer is repeat when the customer has more than one qualifying completed order under the agreed history rule.
- Customer identifiers must be standardized before repeat-rate calculations.
- Guest transactions without reliable customer identity are excluded from customer-level repeat metrics unless an approved identity rule exists.

4. KPI Rules

ID	Business Rule
BR-008	Total Revenue = sum of qualifying order revenue.
BR-009	Total Orders = count of qualifying orders.
BR-010	AOV = Total Revenue / Total Orders; if orders are zero, show blank or N/A.
BR-011	Return Rate = returned qualifying orders / qualifying orders.
BR-012	KPI logic must be consistent across dashboard pages.

5. Reporting Rules

- Dashboard displays the selected reporting period.
- Filters apply consistently where the dimension is applicable.
- Data refresh date/time is visible.
- Material data-quality exceptions are documented and communicated.

6. Security and Change Rules

- Customer-sensitive information is restricted to authorized users.
- Production credentials and secrets must never be stored in GitHub.
- Changes to approved KPI logic require business-owner review.
- Material requirement changes trigger impact analysis and relevant UAT retesting.
