

E-Commerce Sales & Customer Analytics

Process Analysis & Gap Analysis

Document ID	EC-BA-004
Version	1.0
Project Period	January 2023 - April 2023
Prepared By	Lead Business Analyst
Status	Baseline / Portfolio Case Study

Portfolio note: Simulated case study using illustrative processes and data.

1. Purpose

Analyze the current reporting workflow, identify operational and information gaps, and define a target-state process for standardized e-commerce sales and customer analytics.

2. AS-IS Process

Step	Current Activity	Owner	Pain Point
1	Extract sales/order data from operational sources.	Operations / Data	Multiple extracts and manual downloads.
2	Prepare spreadsheets and clean data.	Analyst	Manual cleansing and inconsistent formats.
3	Combine sales, customer and return information.	Analyst	Different files and identifiers require reconciliation.
4	Calculate KPIs in spreadsheets.	Analyst / Finance	Formula differences create disputes.
5	Create charts and management report.	Analyst	Repeated manual formatting and refresh effort.
6	Send report to stakeholders.	Analyst	Static reports provide limited drill-down.
7	Stakeholders identify issues and request follow-up.	Business Teams	Another reporting cycle may be required.

3. AS-IS Process Flow

Source Data → Manual Extraction → Spreadsheet Cleaning → Data Consolidation → Manual KPI Calculation → Report Creation → Distribution → Management Review → Ad-hoc Follow-up

4. AS-IS Pain Points

- Manual extraction and consolidation increases preparation effort.
- Different KPI formulas can produce inconsistent results.
- Customer identifiers may not be standardized across files.
- Historical comparisons require repeated spreadsheet work.
- Static reports provide limited drill-down.
- Data-quality exceptions may be discovered late.
- Follow-up analysis is dependent on analyst availability.

5. TO-BE Process

Step	Target Activity	Owner	Expected Improvement
1	Receive approved source datasets.	BI / Data	Controlled source intake.
2	Apply validation and transformation rules.	BI / Data	Repeatable data preparation.
3	Apply approved KPI business rules.	BI / Data + Finance	Consistent calculations.
4	Publish governed analytical dataset.	BI / Data	Reusable reporting layer.
5	Refresh Power BI dashboard.	BI / Data	Controlled recurring refresh.
6	Business users analyze KPIs and dimensions.	Business Teams	Faster self-service insight.
7	Capture decisions, issues and actions.	Business + BA	Traceable follow-up.

6. TO-BE Process Flow

Approved Sources → Data Validation → Transformation → KPI Rules → Governed Dataset → Power BI Refresh → Business Analysis → Decision/Action → Feedback & Change Control

7. Gap Analysis

Area	Current State	Future State	BA Action
Data preparation	Manual spreadsheet cleaning	Standardized transformation	Document source mapping and validation rules.
KPI definitions	May vary by team	Single approved catalogue	Baseline definitions and obtain approval.
Reporting	Static/manual reports	Interactive governed dashboard	Define dashboard requirements and acceptance criteria.
Customer analysis	Manual / limited	Reusable customer dimensions	Define identity and segmentation rules.
Returns	Separate/manual analysis	Integrated return KPIs	Define return event and rate logic.
Data quality	Detected during reporting	Pre-publication validation	Create quality checks and exception process.
Traceability	Scattered documents	Requirement-to-UAT traceability	Maintain IDs and change log.
Access	File-based sharing	Role-based access	Define security requirements.

8. Target-State Controls

- Approved KPI definitions are version controlled.
- Source-to-report mapping is documented.
- Critical data-quality checks occur before dashboard refresh.
- Dashboard access aligns with business roles.
- Requirement changes follow impact assessment and approval.
- UAT evidence is retained against requirement IDs.

9. BA Deliverables

Deliverable	Purpose
AS-IS Process Map	Document current workflow and pain points.
TO-BE Process Map	Define improved target workflow.
Gap Analysis	Compare current and target capabilities.
Business Rules	Control KPI and reporting logic.
Traceability	Connect requirements to implementation and UAT.
Change Log	Control scope and requirement changes.

10. Expected Business Benefits

Reduced manual reporting effort, improved KPI consistency, faster access to management insights, clearer ownership of data-quality issues and stronger traceability from business need to delivered solution.

11. Validation Checklist

- Business owner validates AS-IS pain points.
- Stakeholders confirm target-state workflow.
- Finance approves KPI calculation logic.
- BI/Data confirms source and transformation feasibility.
- QA confirms requirements are testable.
- Business approves gap-analysis priorities.
