

E-Commerce Sales & Customer Analytics

User Stories & Acceptance Criteria

Document ID	EC-BA-005
Version	1.0
Project Period	January 2023 - April 2023
Artifact Type	Agile requirements / testable acceptance criteria

Portfolio note: Simulated case study using illustrative requirements, roles and data.

1. Purpose

Convert approved business and functional requirements into implementation-ready user stories with clear acceptance criteria. The stories are written to support refinement, development, QA and UAT.

2. User Story Format

As a [role], I want [capability], so that [business value].

3. User Stories

ID	Role	Capability	User Story	Traceability	Priority
US-001	Sales Manager	view sales KPIs	I can view revenue, orders and AOV so that I can monitor sales performance.	BR-001 / BR-002	Must
US-002	Sales Manager	filter by date	I can select a date range so that I can analyze a specific reporting period.	BR-002 / FR-002	Must
US-003	Sales Manager	filter by region	I can filter sales by region so that I can identify regional performance.	BR-002 / FR-003	Must
US-004	Sales Manager	analyze category performance	I can view category-level revenue so that I can identify high and low performing categories.	BR-002 / FR-007	Should
US-005	Marketing Manager	identify repeat customers	I can distinguish new and repeat customers so that I can support retention decisions.	BR-003 / FR-008	Must
US-006	Operations Manager	monitor returns	I can view return rate and return volume so that I can identify operational issues.	BR-004 / FR-009	Must
US-007	Finance Manager	validate KPI calculations	I can reconcile dashboard KPIs against approved rules so that reporting is trusted.	BR-005 / FR-011	Must
US-008	Business User	see refresh status	I can see the latest data refresh date/time so that I know how current the report is.	FR-012	Must
US-009	Authorized User	access approved data	I can access information appropriate to my role so that sensitive customer data is protected.	BR-008 / FR-014	Must
US-010	Business User	drill into performance	I can drill from summary KPIs to relevant dimensions so that I can investigate drivers.	FR-010	Should
US-011	BA	trace requirements	I can trace requirements to UAT cases so that implementation and validation are auditable.	BR-009 / FR-015	Must
US-012	Product Owner	control changes	I can review the impact of requirement changes so that scope remains controlled.	BR-010	Must

4. Acceptance Criteria

Story ID	Acceptance Criteria
US-001	Given the dashboard is loaded, when no filter is applied, then Total Revenue, Total Orders and AOV are visible and calculated using approved rules.
US-002	Given a valid date range, when the user applies it, then all applicable KPIs and visuals update to the selected period.
US-003	Given a region is selected, when the filter is applied, then regional KPIs and applicable visuals reflect that region.
US-004	Given category data exists, when the user views category analysis, then revenue contribution is displayed by category.
US-005	Given customer identifiers are valid, when customer analysis is run, then customers are classified according to the approved repeat-customer rule.
US-006	Given qualifying order and return data exists, when the returns view is opened, then return volume and return rate are displayed using approved rules.
US-007	Given an approved KPI definition, when Finance reconciles the result, then the dashboard calculation matches the agreed business rule within the approved tolerance.
US-008	Given the dashboard has refreshed, when a user views the report, then the latest refresh date/time is visible.
US-009	Given a user role is defined, when the user opens the report, then only data permitted for that role is exposed.
US-010	Given a visual supports drill-down, when the user selects a dimension, then the detail reflects the selected context without breaking KPI filters.
US-011	Given a requirement has an approved ID, when UAT is prepared, then at least one test case can be linked to that requirement.
US-012	Given a change request is submitted, when impact analysis is completed, then affected requirements, documents and tests are identified before approval.

5. Definition of Ready

- Business value is clear.
- Stakeholder/owner is identified.
- Requirement or business rule traceability exists.
- Acceptance criteria are testable and unambiguous.
- Dependencies, assumptions and data needs are understood.
- Priority is agreed.

6. Definition of Done

- Requirement implemented according to approved acceptance criteria.
- QA test execution completed.
- Defects are resolved or formally accepted.
- Business/UAT validation completed where applicable.
- Traceability is updated.
- Relevant documentation is updated.

7. BA Interview Talking Points

In an interview, explain that user stories are not simply copied from business requirements. As BA, you decompose the business need into testable capabilities, clarify edge cases, define acceptance criteria, maintain traceability and work with Product, Development and QA during refinement.
