

E-Commerce Sales & Customer Analytics

UAT Testing Documentation

Document ID	EC-BA-009
Version	1.0
Test Cases	15
Status	Prepared for UAT execution

Portfolio note: Simulated UAT package. Test results are intentionally marked Not Executed until a real execution cycle is performed.

1. UAT Objective

Validate that the analytics solution meets approved business requirements, functional requirements and user stories before business sign-off.

2. UAT Scope

Sales KPIs, filters, category analysis, customer classification, returns, refresh visibility, role-based access, drill-down, traceability and change-control validation.

3. UAT Roles

Role	Responsibility
Business Owner	Approve scenarios and provide business sign-off.
Business Users	Execute scenarios using realistic business questions.
Business Analyst	Coordinate UAT, clarify requirements, maintain defects and traceability.
QA	Support test execution, defect reproduction and evidence.
BI/Data	Investigate data/model issues and implement fixes.

4. Execution Workflow

Prepare Test Data → Execute Test Case → Capture Evidence → Pass/Fail → Log Defect → Retest → Business Sign-off

5. Entry Criteria

- Approved BRD/FRD and user stories are available.
- Dashboard build is available in a test environment.
- Required test data is loaded.
- UAT users and roles are available.
- Expected KPI calculations are baselined.

6. Exit Criteria

- All critical and high-priority scenarios are passed or formally accepted.
- No unresolved critical defects remain.
- Known deviations have business approval.
- RTM is updated with execution results.
- Business owner provides UAT sign-off.

7. Sample UAT Scenarios

ID	Scenario	Expected Result	Priority
UAT-001	Verify Total Revenue displays correctly	Total Revenue matches approved SQL/Excel calculation	High
UAT-002	Verify Completed Orders KPI	Completed Orders equals count of qualifying completed orders	High
UAT-003	Verify AOV calculation	$AOV = \text{Total Revenue} / \text{Completed Orders}$	High
UAT-004	Verify date slicer	All applicable KPIs and visuals update to selected period	High
UAT-005	Verify regional filtering	Regional KPI values reflect only selected region	High
UAT-006	Verify category revenue	Revenue is displayed by category and matches source calculation	Medium
UAT-007	Verify New vs Repeat classification	Customer classification follows approved business rule	High
UAT-008	Verify Return Rate	Return Rate matches approved formula	High
UAT-009	Reconcile KPI values	Values match within approved tolerance	Critical
UAT-010	Verify refresh timestamp	Latest refresh date/time is visible	Medium
UAT-011	Verify authorized access	User sees data permitted for role	Critical
UAT-012	Verify restricted data	Restricted customer information is not exposed	Critical

ID	Scenario	Expected Result	Priority
UAT-013	Verify category-to-product drill-down	Product detail reflects selected category/filter context	Medium
UAT-014	Verify requirement-to-test mapping	Each applicable requirement maps to one or more UAT cases	High
UAT-015	Verify impact assessment	Affected requirements, documents and tests are identified before approval	Medium

8. Defect Severity Guidance

Severity	Meaning	Example
Critical	Blocks core business acceptance or exposes restricted data.	Incorrect executive KPI or security breach.
High	Major business function fails with significant impact.	Region filter produces wrong totals.
Medium	Function works with a non-critical issue.	Minor drill-down/display issue.
Low	Cosmetic or low-impact issue.	Label or formatting correction.

9. UAT Sign-Off

Business Owner: _____ Date: _____ Result: PASS / CONDITIONAL / FAIL

10. BA Interview Talking Point

Explain that UAT is business validation, not simply QA testing. The BA prepares traceable scenarios from approved requirements, coordinates business users, clarifies expected outcomes, manages defects and ensures sign-off evidence is captured.
