

E-Commerce Sales & Customer Analytics

Stakeholder Analysis & Requirement Elicitation Pack

Document ID	EC-BA-002
Version	1.0
Project Period	January 2023 – April 2023
Prepared By	Lead Business Analyst
Status	Baseline / Portfolio Case Study

Portfolio note: This is a simulated case study using illustrative business roles and data. It demonstrates BA methods and deliverables.

1. Purpose

This document identifies stakeholders for the E-Commerce Sales & Customer Analytics initiative, assesses their influence and interests, defines engagement and communication needs, and establishes the requirement elicitation approach.

2. Stakeholder Identification

Stakeholder	Primary Interest	Influence	Engagement
Project Sponsor	Strategic value, budget, delivery outcome	High	Manage closely
Business Owner – Sales	Sales KPIs, revenue visibility, regional performance	High	Manage closely
Marketing Manager	Customer segments, retention and campaign insights	High	Manage closely
Operations Manager	Order flow, returns and operational performance	Medium	Keep satisfied
Finance Manager	Revenue definitions, reconciliation and controls	High	Manage closely
Product Manager	Product/category performance and roadmap alignment	Medium	Keep involved
BI / Data Lead	Data model, transformations and dashboard delivery	High	Manage closely
QA Lead	Test coverage, defects and release quality	Medium	Keep involved
Business Analyst	Elicitation, analysis, documentation, traceability and UAT	High	Lead engagement

3. Stakeholder Power / Interest Assessment

High Power / High Interest – Manage Closely: Project Sponsor, Sales Owner, Marketing Manager, Finance Manager and BI/Data Lead.

High Power / Lower Day-to-Day Interest – Keep Satisfied: Executive leadership and senior finance stakeholders after KPI approval.

Lower Power / High Interest – Keep Informed: Product Manager, QA Lead and operational report consumers.

Lower Power / Lower Interest – Monitor: Peripheral report consumers who do not define requirements.

4. Stakeholder Needs & Expectations

Stakeholder	Key Needs / Expectations
Sales	Trusted revenue, order and regional KPIs with product/category drill-down.
Marketing	Customer segmentation, repeat-purchase indicators and campaign-support metrics.
Operations	Return trends, order flow visibility and operational exception indicators.
Finance	Consistent revenue calculation, reconciliation and auditability.
BI / Data	Clear definitions, source mapping, transformation rules and acceptance criteria.
QA	Testable requirements, expected results and traceability to business requirements.
Sponsor	Clear scope, measurable outcomes, risks and decision points.

5. Communication & Engagement Plan

Audience	Method	Frequency	Purpose / Output
Sponsor	Steering update	Bi-weekly	Progress, risks, decisions and escalations
Sales / Marketing	Workshop	Weekly during discovery	Requirements, KPI and process validation
Finance	Validation session	At KPI baseline and UAT	Metric definitions and reconciliation

Audience	Method	Frequency	Purpose / Output
BI / Data	Working session	2–3 times weekly during build	Source mapping, rules and clarifications
QA / UAT users	Test planning / review	Per release	Acceptance criteria, defects and sign-off

6. Requirement Elicitation Approach

- Stakeholder interviews for role-specific needs and pain points.
- Cross-functional workshops for KPI definitions and process alignment.
- Document analysis of existing sales and operational reports.
- Data profiling with the BI/Data team to validate source availability and quality.
- Process mapping for current and target reporting workflows.
- Prototype reviews before dashboard development.
- UAT sessions to confirm requirements were implemented as intended.

7. Requirement Elicitation Questions

1. What business decisions do you make using sales/customer reports?
2. Which reports are currently used, and what problems do they have?
3. Which KPIs must appear on the management dashboard?
4. How should revenue, orders, returns and repeat customers be defined?
5. Which dimensions are required: region, product, category, channel or customer?
6. How frequently should data be refreshed?
7. Who should have access to customer-level information?
8. What data-quality issues are currently known?
9. What action should users take when a KPI falls below target?
10. What would make you consider the solution successful?

8. Workshop Agenda – KPI & Reporting Requirements

Time	Topic	Expected Outcome
00–10 min	Objectives and business problem	Shared understanding
10–25 min	Current reports and pain points	AS-IS issues
25–45 min	KPI definitions	Draft KPI catalogue
45–60 min	Dimensions and filters	Dashboard requirements
60–70 min	Data / access constraints	Assumptions and risks
70–80 min	Prioritization	Must/Should/Could classification
80–90 min	Recap and actions	Owners and due dates

9. Elicitation Outputs

- Approved stakeholder register and decision owners.
- Validated business problem and objectives.
- Agreed KPI definitions and calculation ownership.
- Prioritized functional requirements.

- Documented assumptions, constraints, dependencies and open questions.
- Actions assigned to named owners.
- Items requiring further analysis added to the requirements/issues log.

10. BA Working Principles

- Do not treat stakeholder statements as requirements until analyzed and validated.
- Separate business requirements from solution/technical requirements.
- Record decisions and unresolved questions after every workshop.
- Use measurable acceptance criteria for requirements that will be tested.
- Maintain traceability from business need through requirement, development and UAT.

11. Document Approval

Role	Sign-off	Date
Business Owner – Sales	_____	13-Jan-2023
Marketing Manager	_____	13-Jan-2023
Finance Manager	_____	13-Jan-2023
Project Sponsor	_____	13-Jan-2023
